422 Futures Trading Rooms in the US

Room in Review: TraderShark (www.tradershark.com)

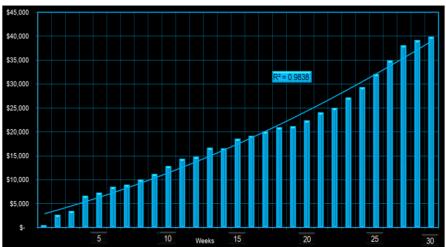

Article by Dean A. Handley, PhD, MBA, JD

TraderShark is run by head trader Brian Rehler, open all day, 5 days a week. He trades ES and 6E indexes in real time and while he has developed very sophisticated strategies and trading concepts; he does not use any specialized charting programs, software or proprietary indicators.

His trade entries, stops and targets are narrated well in advance of the trade execution, and he delineates the logic, set up parameters and other associated knowledge pertinent to that trade. As such he provides real time mentorship, as well as financial stewardship, for all students and advanced traders in his room. His trade style is open and friendly and technical analysis includes price ranges and patterns, fundamental indicators, candlesticks and right on down to VWAP; he is a traders' trader. He weaves through market information to express his trade strategies and will answer any question with sincerity and honesty.

I have executed 505 live ES trades taken by Brian Rehler over 30 weeks (late May – early Dec 2012) @ 2

contracts/trade, with targets and exits defined by Mr. Rehler. Cumulative weekly gross profits with a linear regression line and R² value are shown. In TraderShark, trade entries, targets and stops are specific and clearly defined, and the posted track record is accurate and complete. Mr. Rehler exhibits an excellent command of

technical indicators, a highly steadfast performance over time ($R^2 = 0.9838$) and a strong sense of financial stewardship towards room attendees. I averaged \$346/d. His live trade room is conducted with sincere mentorship and patience. Quite frankly his performance in the ES is second to none and I see Brian as a superlatively accomplished trader. He also has begun to endorse advanced methods to enhance trade performance [3], including computationally defined trailing stops [4]. He is endorsing my motto: "Trade like a machine, celebrate like a human©".

If we define trading for a living as a net profit of \$50,000/yr (\$100/wk; \$200/day), then an average gross profit of \$346/d would more than achieve our financial goals. His membership fees are among the least expensive I have observed in the 422 futures sites I have visited.
